

Where people come together, you're almost certain to find Daiken products at work, often in places that are not so obvious.

Daiken products are also hard at work in urban areas, where vast numbers of people live and work. Dai-Lotone, which is used extensively at the Kansai International Airport and in Tokyo prefectural government offices, is a construction material of which Daiken is extremely proud. Daiken is also a specialist in the field of industrial materials. It is not always easy to see where Daiken products are being used and industrial applications, but Daiken materials can be found in transportation equipment, home electric appliances, and even in musical instruments.
