New Concepts, New Technologies, New Materials—Daiken is always at the forefront of the new era.

Mineral Fibers and Volcanic Glass, Primary Raw Materials for Dailite

Through its many years as a construction material manufacturer, Daiken has developed numerous outstanding products, including insulating boards, Mineral fiber ceiling materials, high-durability WPC material, and the inorganic, high-performance Dailite material that is environment-friendly and made from previously untapped natural raw materials. These are just some products representative of the Daiken product group, products resulting from Daiken's enterprising research, revolutionary concepts, and high-level technologies. Daiken—always one step ahead.

New WPC Material

Plastic is injected into the pores of wood materials and hardened, creating the new WPC material. This new material offers the strength of plastic combined with the quality appearance of wood.

Mineral Fiber Sound Absorbing Panels, Flame Resistant Ceiling Material
